## Redrow Degree

BSc Construction Management – Housebuilding

### What is the Redrow Degree?

At its core the three-year Construction Management in Housebuilding degree BSc was developed by Redrow in partnership with Liverpool John Moores University and Coleg Cambria. The degree is designed to support further development within your current role and expand your knowledge in all areas of construction and management. It's further evidence of how we value our people and demonstrates the commitment to our employees and improving the construction industry as a whole.

### Who is the degree for?

The Redrow degree is open to our employees within Redrow, including Site Managers, Assistant Site Managers, Sales Consultants, and Customer Care and Technical teams. In fact any colleague able to commit the time with the support of their line manager can opt in to undertaking the Redrow Degree!

“

I never thought I would get, or study for, a degree, so it's a great opportunity for me. I am learning so much more and developing an even greater understanding of the industry, which will help me do my job even better. I left school at 16 not knowing what I wanted to do. I never did well and left without any GCSEs. After training to be a joiner and spending time in the Forces, I joined Redrow as a finishing foreman and have just gone on from there.

“The degree was explained as a possibility for those who are driven and passionate about what they do, and I am. We do a week at university and then several weeks on site, as well as other learning. Time management is an issue, it's a demanding degree course, but you put in what you expect to get out. The teachers are amazing. We've looked at health and safety, surveying and business theories in the first year, and it is already giving me a more in-depth knowledge of the business. It will be such an achievement for me to get a degree and will hopefully lead to a higher managerial role within Redrow.”

**Shane Jones**  
Assistant Site Manager

“

Completing the degree course is just a great thing to do! I've enjoyed the study, never thought I'd get the chance to go to university and I've learned so much, site based knowledge and about departments and functions I just wouldn't have known about in my role, but life skills too – how to learn, how to present and lots of other useful knowledge.

I completed an apprenticeship with Redrow straight from school, I'd always wanted to be more practical and go straight into work and not very academic – doing the Redrow degree course has given me the chance to complete a degree whilst gaining experience first. I will have no debt and been paid and promoted during my time with the company! Its definitely something I'd recommend anyone to do.”

**Honor Dickens**  
Assistant Designer

## How is the Degree structured?

The degree course will see students study six modules each year covering different areas of housebuilding, including quality, project management, health and safety, business skills and negotiations, through to aspects of law, mathematics and economics.

There will be six blocks of learning throughout each year consisting of one week each held at the Coleg Cambria campus in Wrexham in our own dedicated Redrow suite. With more direct access to lecturers and tutors, the smaller group size compared to a regular degree will facilitate your learning and allow you to have a more direct influence on the manner in which you learn.

You will work towards an assignments following each module working to a strict deadline; this will require good time management and commitment to complete within the time frame.

## How can I get on the degree programme?

You are eligible to undertake the degree if you have support from your line manager and authorisation and meet any of the following criteria:

- Have at least a level 3 qualification, NVQ, BTEC or A-levels
- 5 Years on site experience

It is important that you understand the level of commitment and work that will be asked of you once you begin your pathway on the degree. Redrow will support you however we can but the drive and commitment to undertake the degree can only come from you!

## What are the benefits to me?

A degree education gives the opportunity to learn a wide variety of skills, analytical, research, time management, networking to name just a few .

The Construction Management in Housebuilding course syllabus allows colleagues from across the company to learn about every aspect of the modern housebuilding process – from land survey, design, construction to completion and sale and represents a fantastic opportunity to further knowledge of our business.

## What accreditations are included as part of the degree?

As part of the Degree you will also gain a student membership to the Chartered Institute of Building (CIOB) leading to a full membership on completion of the degree.
